OBJECTIVE

AI-ML undergraduate with a CGPA of 9.30, combining a strong academic foundation with hands-on project experience in computer vision and deep learning. Seeking a Software Engineering or AI/ML internship to apply strong fundamentals in data structures, algorithms, and machine learning to real-world problems.

EDUCATION

VIT Bhopal University	2023 – 2027
<i>B.Tech, Computer Science Engineering (AI-ML)</i>	CGPA: 9.30
St. Xavier's Sr. Sec. School, Delhi	2022 – 2023
<i>Class XII (CBSE)</i>	94.8%
St. Xavier's Sr. Sec. School, Delhi	2020 – 2021
<i>Class X (CBSE)</i>	97.6% (School Topper)

PROJECTS

Facial Expression Recognition	Jan 2024 – Apr 2024
<i>Python, TensorFlow, Keras, OpenCV, Scikit-learn</i>	

- Built a facial expression recognition system to classify 7 emotions by combining VGG16 for feature extraction with an SVM classifier for prediction.
- Applied image preprocessing and data augmentation techniques (resizing, normalization, rotation, and flipping) to reduce overfitting and improve model generalization.
- Evaluated the CNN-SVM pipeline on the CK+ and FER2013 datasets, achieving **97.97% validation accuracy** on the CK+ dataset.
- Co-authored a Springer research paper on the proposed CNN-SVM approach for facial expression recognition.

AutoSense – Automatic Number Plate Recognition (ANPR)	Jan 2026 – Mar 2026
<i>Python, YOLOv8, EasyOCR, OpenCV, Streamlit</i>	

- Built an Automatic Number Plate Recognition (ANPR) system using YOLOv8 for license plate detection and EasyOCR for text extraction.
- Converted Pascal VOC annotations from a Kaggle dataset to YOLO format and trained the YOLOv8n model on 433 annotated vehicle images.
- Fine-tuned a pretrained YOLOv8n model on the annotated dataset, achieving **92.4% mAP@50** for license plate detection.
- Implemented an OCR preprocessing pipeline using grayscale conversion, CLAHE, adaptive and Otsu thresholding, and image sharpening to improve text extraction accuracy.
- Designed a Streamlit application supporting JPG, PNG, and WEBP image uploads, displaying detected license plates with extracted text and OCR confidence scores.

TECHNICAL SKILLS

Languages: Python, C++, Java, SQL

Libraries/Frameworks: TensorFlow, PyTorch, OpenCV, YOLOv8, Scikit-learn, Keras

Core Concepts: Data Structures & Algorithms, Object-Oriented Programming (OOP), Operating Systems, Computer Networks

Tools: Google Colab, Jupyter Notebook, Roboflow, Git

ACHIEVEMENTS

- Co-authored research paper published in Springer on facial expression recognition (97.97% accuracy).
- Ranked in the Top 5% of learners in NPTEL Cloud Computing (IIT Kharagpur / NPTEL).
- Secured 3rd place in Solvit Hackathon organized by the hostel committee.
- Solved 200+ Data Structures & Algorithms problems on LeetCode and GeeksforGeeks.
